SECTION A POINT 4 - MACHINE DESCRIPTION

SECTION A - POINT 4 MACHINE DESCRIPTION

The AUTOMATIC DIVIDER MOD. "BUTTER PRESSING MACHINE" is a machine with hydraulic controls, very quick and noiseless; provided with a timer so that the butter wrappings can be differently pressed. At the end of every working cycle the machine stops, avoiding the overheating of oil and motor. The machine members are easily accesible so that the operator can clean the machine without difficulty. The electronic installation is completely isolated from the other machine members. The basket and the closing plane are in INOX steel, the pressing plane in food nylon in order to avoid any contamination of product.
